

Hifdh Goal Calculator

5-day weekly Hifdh plan - for teacher and student goal setting

Student Name: _____	Date: _____
Teacher: _____	Start Date: _____

Step 1 - Where is the student starting from?

Total Qur'an pages in your Mushaf	604 pages
Pages already memorised	_____ pages
Pages remaining	604 - _____ = _____ pages
Optional: Juz already memorised	_____ Juz

Step 2 - Choose the realistic daily Hifdh amount

Daily amount	Teacher writes student target here
Lines per day	_____ lines per day
OR pages per day	_____ pages per day
Hifdh days per week	5 days per week

Step 3 - Calculate the finish time

A. If using pages per day	Daily pages x 5 = weekly pages
Weekly pages	_____ x 5 = _____ pages per week
Weeks needed	Pages remaining _____ / weekly pages _____ = _____ weeks
B. If using lines per day	Daily lines x 5 = weekly lines; 15 lines = 1 page
Weekly pages	(_____ lines x 5) / 15 = _____ pages per week
Weeks needed	Pages remaining _____ / weekly pages _____ = _____ weeks

Step 4 - Add a realistic buffer

Calculated weeks	_____ weeks
Add buffer for illness, school, holidays and revision load	+ _____ weeks
Realistic total	_____ weeks
Projected Hafidhah completion date	_____

Teacher note

The date is only a helpful target. It should encourage the student, not pressure her. If revision becomes weak, slow down the new memorisation and protect quality.

Teacher Calculation Key

Use this page when setting targets during the Hifdh discovery meeting

Main rule

Because Hifdh is 5 days a week:	Daily amount x 5 = weekly amount
If student memorises pages	Weekly pages = daily pages x 5
If student memorises lines	Weekly pages = (daily lines x 5) / 15
Finish time	Weeks = pages remaining / weekly pages

Quick conversion table

Student pace	Weekly progress	Approx. time for whole Qur'an from zero
1 line per day	5 lines/week = 1 page every 3 weeks	about 35 years
3 lines per day	15 lines/week = 1 page/week	about 11 years 7 months
5 lines per day	25 lines/week = 1.7 pages/week	about 7 years
10 lines per day	50 lines/week = 3.3 pages/week	about 3 years 6 months
1/4 page per day	1.25 pages/week	about 9 years 4 months
1/2 page per day	2.5 pages/week	about 4 years 8 months
1 page per day	5 pages/week	about 2 years 4 months
2 pages per day	10 pages/week	about 1 year 2 months

How to use this with a real student

1	Ask how much time she can realistically give, then choose a daily amount.
2	Convert the daily amount into weekly pages using the rule above.
3	Count how many pages she still has left to memorise.
4	Divide remaining pages by weekly pages to get weeks needed.
5	Add a buffer. For most students, add 10% to 25%. For very young students, add more.
6	Review the target every month. If quality is weak, reduce new Hifdh before increasing pressure.

Worked examples

Example	Calculation	Meaning
1 line per day	5 lines/week = 1 page every 3 weeks	Very gentle pace. Good for a young or busy beginner, but it will be a very long journey.
1/2 page per day	$0.5 \times 5 = 2.5$ pages/week	A steady long-term pace. Full Qur'an from zero is about 4 years 8 months before buffers.

The goal is not only to finish. The goal is to become a companion of the Qur'an with strong Hifdh, steady revision and beautiful adab.
